## KURRI KURRI

3<sup>rd</sup> August 2010

To whom it may concern,

When I first looked into the CellarControl system, I was sceptical due to the obvious importance of the effect it would have on the quality of beer served. Given the fact that I was wasting up to 60 schooners each week when doing my line clean, and the time taken to complete this task each week, I decided to give the unit a trial. I was offered a 6 month money back guarantee and given that nothing changes in my current cleaning process apart from the fact I can do it less often, I really had nothing to lose.

It has now been 10 months since I started using the system and I have had no comments as to a change in beer quality from any of my customers. I have not calculated the total savings however I am saving myself approximately 2 hours per week in my time and reducing my chemical costs and water usage. Beer wastage of 60 schooners per week has not only stopped but I am also able to sell those schooners previously tipped down the drain.

I would recommend giving this system a go as what you save far exceeds the cost of the unit and there is no negative impact beer quality. If you would like to discuss the system give me a call or call in for a beer I would be happy to show you the system.
