PRESENTATION TODAY!

Termites can & will destroy your home plus belongings before you even realise there is a problem.

# TERMITE TECHNOLOGY MANAGEMENT SYSTEMS

“TTM”

Phuket Thailand Distributor and Installation Specialists

## Termites in Thailand

Termites are rampant through tropical and sub tropical regions. Thailand is located within the tropical climatic zone with various types of forest ecosystems that are suitable for termite growth and development. Termite nests can easily be found everywhere in the forests, farmlands, rural shelters homes and even in city buildings. From studies, there have been 92 species of termites recorded in Thailand Formosan subterranean termites ( predominate throughout Thailand) have also been known to attack (but not eat) non-cellulose material such as thin sheets of soft metal (lead or copper), asphalt, plaster, mortar, creosote, rubber, and plastic in search of food and moisture. However, their highly publicized ability to chew through concrete is a fallacy. Instead of chewing through the concrete, Formosan subterranean termites are uncanny in finding small cracks in concrete that they use as foraging routes. Basically they eat away and destroy your home from the base to the roof. There are even villages called Bahn Pluark (Termite Mound) in this country which must say something

- **TERMITES ARE A MAJOR PROBLEM IN THAILAND!**  
**There is an Answer!**

- It 's New
- It 's Revolutionary
- It 's been proven to work and continue working to stop REINFESTAIONS
- It's maintenance free
- It's free of poisonous chemicals and baits
- It 's installed in appox 5hrs and non intrusive
- It's able to relocate current infestation and prevent any further infestations for years and years
- It has a 3 year warranty the product

You can be assured that your precious wooden furniture and house fittings in your home won't be destroyed by termites

The answer is

The “TTM” System

## How the Termite Technology Management “TTM” works

The Termite Technology Management (“TTM”) system is a preventative measure for termite management using a computer **microchip** to induce sweeping sound frequencies (**SSF**) through **activators** (sound amplifiers).

By utilizing an electro-magnetic field (**EMF**) as a vehicle, we are able to successfully transfer the sweeping sound frequencies emitted from the activators into a target area.

Probably, one of the most important and significant means of communicating for termites is based on vibration signals. Because of this, termite behavior could be influenced through sound signals.

Termites have also been reported to be influenced by magnetic fields and to be capable of using the geomagnetic field for a number of activities such as foraging,

### Old Methods of trying to control Termitexs

Currently being rid of termites is a timely, ever constant and expensive problem. The termite “experts “ of the world battle the termite problem throughout the world with a number of methods such as:

- Expensive processes whilst building your new homes
- Recommendations to use expensive woods such as teak which people are now realising need to be conserved
- Baits and poisons which have been proven to be harmful to the environment and can have harmful side effects to humans and animals. They also require MONTHLY upkeep and maintenance.

All of the current methods of termite control are costly and simply don't work Reinfestation is nearly guaranteed and you constantly have the threat of termites returning

With the TTM System you simply have it installed and from that day forward the termites will leave not wanting return again Your TTM system has

- NO maintenance,
- NO expensive upkeep costs,
- NO harmful products
- NO THREAT OF REINFESTATION!

You can live your life and not worry about termites again!

- The TTM system takes just a few hours to install
- It is very cost effective and you have no ongoing maintenance fees.
- Simply have it installed and have piece of mind that you no longer have to worry about termites
