

Anti Bio Water Treatment

Patented Chemical-free Water Cleaning Technology.

We are not big fans of biofilm, understandably. Our patented and proven technology removes and/or reduces biofilm build up, which is the home to parasite & virus waterborne pathogens.

Anti Bio Technology uses no chemicals to:

Increase ORP Oxidation Redox Potential by 30% or more, which is good for the body, environment and marine life.

The only technology to successfully control biofilm in an environmentally and safe manner

Proven on multiple occasions to treat bore/well water to an acceptable “potable” standard and in some cases drinking standards, using Anti Bio alone or in conjunction with a suitable filter.

Treating the water with Anti Bio has improved cultivation of crops, where the roots are much bigger, healthier and cleaner resulting in more yield and less contamination threats.

We have successfully

- been able to increase calcium dissolving into solution therefore less calcium is adhering to surface matter and getting clogged up in the water distribution system or appliances.
- been able to deactivate odors
- or reduce the smell of micro-organisms
- successfully combated cryptosporidium by up to 60% on one pass of the system.
- successfully controlled contamination threats from Pseudomonas Aeruginosa that come from bird droppings and the like, which affects our eyes, throat and ears.

System Warranty

The system has a two-year warranty. Being fully automated it does not require any maintenance or replacement parts. It is recommended to keep the control unit in a dry place to ensure longevity.

Effective for up to 15 years

It has an estimated life span of ten to fifteen years.

Anti Bio WaterTechnologies can be found in water parks, resorts and hotels around the world, and is now available for everyday home owners.

“Pools that are poorly maintained can create potential health risks for users. Harmful bacteria and viruses must be killed quickly to prevent user infection. Contaminants such as sunscreen, skin and hair should also be treated or removed. some infections can be serious or fatal.” – SA Health

Member of The Australian Technology Showcase since 2002.

Australian Technology Showcase (ATS) is an Australian networking organisation designed to develop export markets for innovative technology based products for small to medium sized businesses with annual turnover of less than \$10 million.

Anti Bio Technologies was recognised by ATS as an innovative technology in 2002.
